## Steam Specialties

### Radiator Trap Renewal Elements

#### Application

The MEPCO renewal element is One Piece Construction, are 100% factory calibrated and every unit is tested under live steam. This allows for quick and efficient replacement with the trap body remaining on line when you are renewing a radiator trap or for process applications. **The cost to renew a failed trap can be recovered in less than one heating season.**

Our renewal elements are used on:

- Radiators • Fin Tube • Air Handlers • Sterilizers • Tracer Lines • Main Drips •
- Heat Exchangers • Steam Kettles • Laundry Equipment • Platen Presses

---

## Features and Benefits

---

- 1.) Solid Stainless Steel cage and cover protects the thermostatic element from water hammer has been factory calibrated to insure immediate discharge of condensate as it forms. The Stainless Steel valve and seat also resist corrosion.
- 2.) No special tools are necessary for installation.
- 3.) The ELEMENT provides renewal for traps with integral stainless steel seats without any re-machining in the field.
- 4.) Eliminates Water Hammer and noise caused by traps that have failed closed.
- 5.) Don't be misled by quick fix solutions like capsules, nuggets, fixed orifices or other imitations of our time tested technology of 100+ years that go into every ELEMENT.
- 6.) All ELEMENTS are designed to exceed original manufacturers specifications and meet Federal Spec WWT-696.
- 7.) Manufactured in the U.S.A.

#### Materials

Part	Description
Housing	Stainless Steel
Valve Plug	Stainless Steel
Valve Seat	Stainless Steel
Spring	Stainless Steel
Gasket	Non Asbestos Kevlar based
