

MEPCO Expands Machine Shop Again!

For Immediate Release – June 2014

Grand Rapids, MI – MEPCO has continued to invest and expand our machining capabilities. We have added three Tsugami Swiss CNC Lathes that greatly increase our machining capacity and abilities. Each of these machines is equipped with auto loading bar feeders which allow one operator to run all three machines while still maintaining our strict quality standards. A nice benefit is these acquisitions also strengthen our commitment to made-in-Michigan/USA products.
