

MEPCO Expands Machine Shop...Again!

Immediate Release – August 2018

Grand Rapids, Michigan – MEPCO has made another significant investment and expanded our machining capabilities! We have added two Tsugami Swiss CNC Lathes and a Tsugami Lathe with Y-Axis and live back spindle that greatly increase our machining capacity and abilities. Each of these machines is equipped with auto-loading bar feeders which allow one operator to run all three machines while still maintaining our strict quality standards. This investment also strengthens our commitment to made-in-Michigan/USA products.
